PARC Principles, Specifically Contrast:

Proximity: The use of Earth Blue, Travel Green, and Creamy Beige in close proximity creates a harmonious and visually pleasing palette. These colors work together to represent the Earth and nature, aligning with the travel theme.

Alignment: Consistency in color use across the design elements ensures that visual elements are aligned and maintain a cohesive look and feel.

Repetition: Repeating the Earth Blue and Travel Green as dominant colors throughout the design, such as in backgrounds and headers, establishes a consistent visual rhythm.

Contrast: Contrast, a crucial aspect of the PARC principles, is achieved by introducing Desert Brown as an accent color. This brown provides a striking contrast to the predominantly blue and green tones, drawing attention to specific elements like buttons or important information.
