ECE 35,	Fall 2024		Your sequence number	
		Last name		
Quiz 2	/ 12	First + middle name(s)		
	/ 12	PID		

Instructions:

- Read each problem completely and thoroughly before beginning.
- All calculations need to be done on these sheets.
- Write your answers in the answer boxes for each question. Make sure you list units!
- Answers without supporting calculations will receive zero credit.
- (1) (6 points) Consider the circuit below. At time t = 1 s, the current source changes as shown in the figure, and will not change after that. Immediately before the current source changes, the system is <u>not</u> guaranteed to have reached steady-state.

However, you are told that immediately after the change, i.e., at time $t=1^+$, the node voltage $v_a=2$ V. In other words: $v_a(1^+$ s) = 2 V.

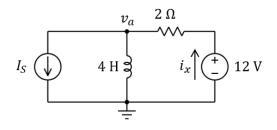

(a) Find $i_x(1^+ s)$. (i.e., the current just <u>after</u> the current source changes)

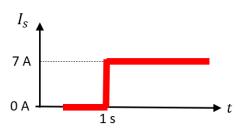

- $i_x(1^+ s)$
- (b) Find $v_a(1^- s)$. (i.e., the node voltage just <u>before</u> the current source changes)
- $v_a(1^- s)$

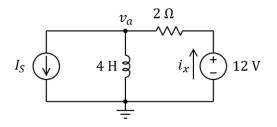

(c) Find $i_x(\infty)$.

 $i_{\chi}(\infty)$

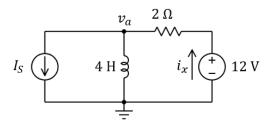

- (d) Find $i_x(4 \text{ s})$. (i.e., the current at time t = 4 s). You can leave your answer as a function of e.
- $i_x(4 s)$

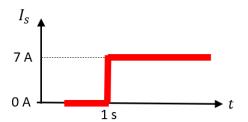

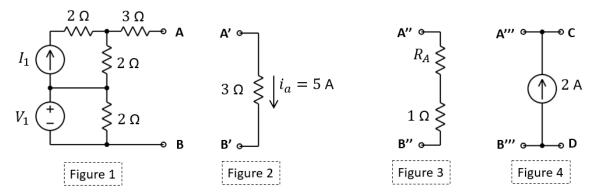

(2) (6 points) Consider the circuit below in Figure 1. You are not told the values of I_1 and V_1 . However, you are told that if you attach the circuit from Figure 2 to the one from Figure 1 (with A' connected to A and B' connected to B), the value of $i_a = 5$ A.

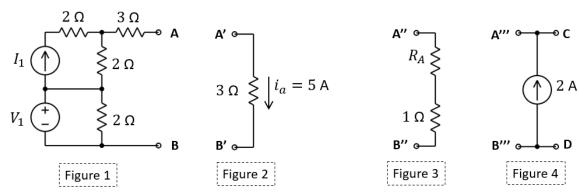

(a) <u>Draw</u> the <u>Thevenin</u> model between A and B for the circuit in Figure 1 (make sure you label A and B in your drawing).

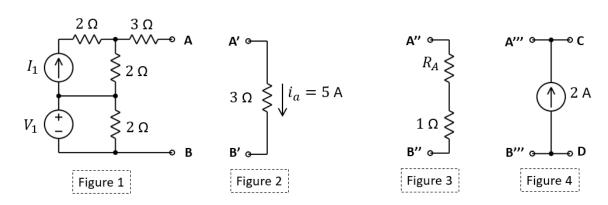

(b) The circuit from Figure 3 is attached to the one from Figure 1 (with A" connected to A and B" connected to B). What should be the value of R_A to maximize the power received by R_A ?

R_A	

(c) The circuit from Figure 4 is attached to the one from Figure 1 (with A''' connected to A and B''' connected to B). For this new combined circuit, <u>draw</u> the <u>Norton</u> model between C and D (make sure you label C and D in your drawing).

ECE35 Equation Sheet

Basics:
$$i \triangleq \frac{dq}{dt}$$
 $v_{ab} \triangleq \frac{dw}{dq}$ $R = \rho \frac{l}{A}$

Capacitors:
$$C = \epsilon \cdot \frac{A}{d}$$
 $Q = C \cdot v$ $w_C = \frac{1}{2}Cv^2$

Inductors:
$$L = \mu \cdot \frac{N^2 A}{l}$$
 $B \sim i$ $w_L = \frac{1}{2} L i^2$

AC power:
$$p(t) = \frac{1}{2}V_mI_m \cdot \cos(\theta_v - \theta_i) + \frac{1}{2}V_mI_m \cdot \cos(2\omega t + \theta_v + \theta_i)$$

$$P = \frac{1}{2}V_m I_m \cos(\theta_v - \theta_i) \qquad Q = \frac{1}{2}V_m I_m \sin(\theta_v - \theta_i) \qquad X_{rms} = \sqrt{\frac{1}{T} \int_0^T x(t)^2 dt}$$

Trigonometry:
$$\sin(-\alpha) = -\sin(\alpha)$$
 $\cos(-\alpha) = \cos(\alpha)$

$$sin(\pi - \alpha) = sin(\alpha)$$
 $cos(\pi - \alpha) = -cos(\alpha)$

$$\sin\left(\frac{\pi}{2} - \alpha\right) = \cos(\alpha)$$
 $\cos\left(\frac{\pi}{2} - \alpha\right) = \sin(\alpha)$

$$\sin\left(\alpha - \frac{\pi}{2}\right) = -\cos(\alpha)$$
 $\cos\left(\alpha - \frac{\pi}{2}\right) = \sin(\alpha)$

$$\sin(2\alpha) = 2\sin(\alpha)\cos(\alpha)$$
 $\cos(2\alpha) = \cos^2(\alpha) - \sin^2(\alpha)$

$$\sin(\alpha \pm \beta) = \sin(\alpha)\cos(\beta) \pm \cos(\alpha)\sin(\beta)$$

$$\alpha: \quad 0 \quad \frac{\pi}{6} \quad \frac{\pi}{4} \quad \frac{\pi}{3}$$

$$\cos(\alpha \pm \beta) = \cos(\alpha)\cos(\beta) \mp \sin(\alpha)\sin(\beta)$$

$$\cos(\alpha \pm \beta) = \cos(\alpha)\cos(\beta) \mp \sin(\alpha)\sin(\beta)$$

$$\sin(\alpha)\sin(\beta) = 0.5 \cdot (\cos(\alpha - \beta) - \cos(\alpha + \beta))$$

$$\sin(\alpha) \cdot \cos(\alpha) \cdot \cos(\alpha) = 0.5 \cdot (\cos(\alpha - \beta) - \cos(\alpha + \beta))$$

$$\cos(\alpha)\cos(\beta) = 0.5 \cdot (\cos(\alpha - \beta) + \cos(\alpha + \beta)) \qquad \tan(\alpha): \quad 0 \quad \frac{\sqrt{3}}{3} \qquad 1 \qquad \sqrt{3} \qquad \infty$$

$$\sin(\alpha)\cos(\beta) = 0.5 \cdot (\sin(\alpha - \beta) + \sin(\alpha + \beta))$$
