$$\frac{1}{3}$$

$$\frac{1}{2}$$

$$\frac{1}$$

$$Z_L = j \omega L = j \cdot 400 \cdot 5 \cdot 10^{-3} = 2j$$

(a) 
$$S_1 = \frac{1}{2} V_1 \cdot J_1^*$$
  $J_1 = \frac{V_1}{Z_R}$   $J_2 = \frac{A_1^2}{2} \cdot J_2 = \frac{100}{2} \cdot 25$ 

(b) 
$$S_2 = \frac{1}{2} V_1 J_2 \times M$$
 [ASSIVE SIGN CONVENTION]
$$= \frac{1}{2} V_1 (-J_S) \times (POWER RECEIVED)$$

$$= \frac{1}{2} V_1 (-J_S) \times (J_S - J_S) \times (J_S$$

$$P_2 = \text{Re}\left[S_2\right] = -10 \cos\left(-\frac{2T_3}{2}\right) = -10\left(-\frac{1}{2}\right) = +5 \text{ m} \text{ recelved}$$

$$P_2 = -5 \text{ W} \text{ supplied}$$

we can check: 
$$S_3 = \frac{1}{2}V_3I_3^*$$
  $V_3 = Z_L.I_3$   
 $= \frac{1}{2}Z_LI_3.I_3^* = \frac{Z_LII_3I^2}{2} = \frac{|I_3|^2.(2)}{2}$   
 $= \frac{1}{2}Z_LI_3.I_3^* = \frac{Z_LII_3I^2}{2} = \frac{|I_3|^2.(2)}{2}$
